**APPENDIX
CLEAN COPY OF CLAIMS ON APPEAL**

1. A component of a rotating machine comprised of a plurality of coils each wound on the pole teeth of a core through a bobbin, said bobbin having portions surrounding said pole teeth of said core for receiving coil windings and an integral terminal portion spaced radially from the coil windings, a plurality of wiring conductors integrally carried by said bobbin coil winding receiving portions, each of said wiring conductors having one terminal end connected at least one of said coil ends and another terminal end exposed within said terminal portion for connection to one external electrical connector through said terminal portion.
2. A component of a rotating machine as set forth in claim 1 wherein the bobbin is comprised of mating halves.
3. A component of a rotating machine as set forth in claim 2 wherein the bobbin mating halves encircle the pole teeth.
4. A component of a rotating machine as set forth in claim 3 wherein the other terminal end of all of the conductors are carried by one of the mating bobbin halves.
5. A component of a rotating machine as set forth in claim 4 wherein the one of the mating bobbin halves is molded with the conductor other terminal ends molded into the one mating bobbin half.
10. A component of a rotating machine as set forth in claim 1 the bobbin is formed, integrally, with a plurality of internal wiring connectors each being formed with a terminal hole into which is led a coil end and with terminal hole into which is led one end of the wiring conductors, and further including a connecting block to be inserted in both of said terminal holes and provided with a connection circuit for connecting said coil ends and said wiring conductors.
